

For the ZTE ZXA10 C600, the SNMP OIDs for GPON ONU management are primarily located under the **1.3.6.1.4.1.3902.1082** subtree, which is the standard architecture for ZTE access nodes 1, 2. While older ZTE models (like the C220) used the 1.3.6.1.4.1.3902.1012 subtree, the C600 documentation explicitly maps its PON services and ONU management to **1.3.6.1.4.1.3902.1082.500 3**.

The OIDs are divided into two main tables: the **ONU Configuration Table** (zxAnGponOnuMgmtTable) and the **ONU Status Table** (zxAnGponSrvOnuStatusTable).

GPON ONU Configuration OIDs

These OIDs are found in the configuration table, indexed by ifIndex and OnuIndex 4.

- **ONU Type (onu-type):** 1.3.6.1.4.1.3902.1082.500.10.2.3.1.1 (zxAnGponOnuMgmtType) 4.
- **ONU Name:** 1.3.6.1.4.1.3902.1082.500.10.2.3.1.2 (zxAnGponOnuMgmtNam) 5.
- **ONU Serial Number:** 1.3.6.1.4.1.3902.1082.500.10.2.3.1.6 (zxAnGponOnuMgmtSn) 6.

GPON ONU Status OIDs

These OIDs are found in the status table, which provides real-time operational data for registered ONUs 7.

- **ONU Admin State (Active/Disabled):** 1.3.6.1.4.1.3902.1082.500.10.2.8.1.1 (zxAnGponSrvOnuAdminStatus) 7.
- **ONU Operational/Phase State:** 1.3.6.1.4.1.3902.1082.500.10.2.8.1.4 (zxAnGponSrvOnuPhaseStatus) 8.
- *Possible values:* logging(1), los(2), syncMib(3), working(4), dyingGasp(5), authFailed(6), offline(7).
- **ONU Last Down Cause (Last Offline Reason):** 1.3.6.1.4.1.3902.1082.500.10.2.8.1.7 (zxAnGponSrvOnuLastOfflineReason) 9.

Summary of Subtree Structure

Component,OID Path

Root Tree,1.3.6.1.4.1.3902.1082 (zxAccessNode) 1

PON Subtree,1.3.6.1.4.1.3902.1082.500 (zxAnPon) 3

ONU Config Table,1.3.6.1.4.1.3902.1082.500.10.2.3.1 4

ONU Status Table,1.3.6.1.4.1.3902.1082.500.10.2.8.1 7

Comparison with 1.3.6.1.4.1.3902.1012:The .1012 subtree is associated with the legacy ZTE-GPON-MIB. For modern ZXA10 series OLTs like the C600, ZTE has transitioned to the .1082 (zxAccessNode) MIB structure for more granular control over features like network slicing (MPU/VND) 2, 10.

Would you like to explore the specific OIDs for ONU optical power levels (Rx/Tx) or the performance statistics for these GPON ports?
